

VOLUMETRIC WEIGHT

The chargeable weight of a consignment is either the actual weight or the volumetric weight,

whichever is the greater.

To calculate the volumetric weight (in kilos), you need to multiply the three dimensions (in centimetres) of your package and then divide the total by 6000.

Height (cm) x Length (cm) x Depth (cm) divided by 6000
= volumetric weight in kgs

If the measurements are given to you in inches, you must use the same formula, except you divide by 366 (not 6000).

Height (inches) x Length (inches) x Depth (inches) divided by 366
= volumetric weight in kgs
